## Solvent Waste System

Fluids in HPLC waste systems are extremely dangerous containing potent volatile organic compounds, posing threat to lab workers.

Astra life Sciences came with an innovative solution introducing Pusil solvent waste system, with activated carbon filters allowing 99% of the volatile vapors to be trapped, providing an organized containment and disposal of HPLC Liquid wastes.

- Filters against harmful vapors
- Different size containers compatible to any space condition
- Several systems can be connected to 1 container
- Capillary fixations with PFA fittings
